Research Interests: Multimodal Large Language Models, Efficient and adaptive machine learning, Model compression

EDUCATION

B.S., Northwestern Polytechnical University

Sep. 2019 - Jun. 2023

Major: Industrial Engineering

GPA: 3.24/4.00

M.S., Northwestern Polytechnical University

Sep. 2023 - Apr. 2026

Major: Intelligent Manufacturing Technology

GPA: 87.56/100 $\approx$ 3.67/4.00

RESEARCH EXPERIENCE

Multi-Granularity Knowledge Distillation via Subspace-Aware Representation

Submitted to ICONIP 2026

Summary: Proposed MGKD, a multi-granularity knowledge distillation framework that transfers teacher knowledge through local attention alignment, subspace-aware supervision, and global feature geometry regularization.

VTPQ: Visual Token Pruning for Redundancy-Aware Post-Training Quantization of Large Vision-Language Models

Submitted to AAAI 2027

Summary: Proposed VTPQ, a redundancy-aware visual token pruning and post-training quantization framework that improves vision-language model efficiency by removing quantization-sensitive yet semantically redundant visual tokens.

Visual Evidence Calibration for Hallucination Mitigation in Multimodal Large Language Models

Submitted to ICONIP 2026

Summary: Proposed VEC-DPO, a claim-level evidence-aware preference optimization framework that mitigates visual hallucinations in multimodal large language models by calibrating DPO objectives with fine-grained visual evidence signals.

PROFESSIONAL EXPERIENCE

Research Intern - Diantou Education Technology Co., Ltd.

Jul. 2024 - Oct. 2024

3D Cardiac Image Segmentation and Registration

Project Overview: Developed and evaluated deep-learning pipelines for 3D cardiac image segmentation and registration. The project resulted in a patent: **A Method, System, and Computing Device for Medical Image Registration and Segmentation** (Chinese).

TECHNICAL SKILLS

Machine Learning and Deep Learning: PyTorch, deep neural networks, representation learning, transfer learning, and independent development of machine learning pipelines.

Efficient and Adaptive Learning: Model compression, quantization, pruning, knowledge distillation, parameter-efficient fine-tuning, meta-learning, and efficient model adaptation.

Computer Vision and Multimodal AI: Vision-language models, multimodal learning, cross-modal alignment, visual representation learning, and efficient deployment of multimodal foundation models.
